DETAILED ACTION

Allowable Subject Matter

1. Claims 1-10 and 12 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claims 1-9, the prior art alone or in combination does not teach the limitation of protection relay comprising a filter means^s, wherein the filter means *PR 12/29/03* comprises:

first filter means for inputting the sampling data v_m and i_m at the first time T_m to a digital filter having transfer function $f(Z).(1+k.Z^{-1}+Z^{-2})$ (Z indicates a Z conversion operator) so as to output a first voltage data and first current data; and

second filter means for inputting the sampling data v_m , i_m at the first time T_m to a digital filter having transmission $f(Z).(1-Z^{-2})$ (Z indicates a Z conversion operator) so as to output a second voltage data and second current data.

With respect to claim 10, the prior art alone or in combination does not teach the limitation of a protection relay for determining whether or not a fault point of power system exists in a predetermined range, comprising:

first filter means for inputting sampling data v_m and i_m of voltage (v) and current (i) in the power system to a digital filter having transfer function $f(Z).(1+k.Z^{-1}+Z^{-2})$ (Z indicates a Z conversion operator) so as to output voltage data v_{sm} and current data i_{sm} ;

second filter means for inputting a sampling data v_m and i_m to a digital filter having transfer function $f(Z).(1-Z^{-2})$ (Z indicates a Z conversion operator) so as to output voltage data v_{jm} and current data i_{jm} normal to the voltage data v_{sm} and current data i_{sm} .

With respect to claim 12, the prior art alone or in combination does not teach the limitation of a protection relay for determining whether or not a fault point of a power system exists in a predetermined range comprising:

a first digital filter having applied thereto inputs including sampling data of voltage and current of the power system and having a first transfer function $f(Z).(1+k.Z^{-1}+Z^{-2})$ (Z indicates a Z conversion operator) so as to output first voltage data and first current data;

a second digital filter having applied thereto inputs including the sampling data of the voltage and the current of the power system and having a second transfer function $f(Z).(1-Z^{-2})$ so as to output second voltage data second current data, the second voltage data and the second current data being normal to the first voltage data and the first current data, respectively.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
